

期中 Project 實作過程 -- 建立 Components_Navbar.js + Navbar.scss

Step1. 在 components 目錄底下，新增 Navbar.js

建立框架

1. 將 theme 中 Navbar 的 <div> 區域貼上
2. 再把 class 更改為 className
3. 更改為<Link to="/">
4. import Navbar.scss

Code:

```
import React from 'react';
import { Link } from 'react-router-dom';
import './Navbar.scss';

const Navbar = () => {
  return (
    <div>
      <div className="tvbs-customized top-padding"></div>
      <div className="tvbs-customized">
        <div className="header">
          <div className="scrollmenu">
            <Link
              id="0"
              to="/"
              target=""
              className="nav-dropdown-toggle actived"
            >
              購物首頁
            </Link>
            <Link
              id="1"
              to="/Product/CategoryL/42?menucat=1"
              target=""
              className="nav-dropdown-toggle"
            >
              生鮮蔬果
            </Link>
            <Link
              id="2"
              to="/Product/CategoryL/24?menucat=2"
              target=""
              className="nav-dropdown-toggle"
            >
              低溫
            </Link>
            <Link
              id="3"
              to="/Product/CategoryL/28?menucat=3"
              target=""
              className="nav-dropdown-toggle"
            >
              TV激推
            </Link>
            <Link
              id="4"
              to="/Product/CategoryL/25?menucat=4"
              target=""
              className="nav-dropdown-toggle"
            >
              小吃
            </Link>
          </div>
        </div>
      </div>
    </div>
  );
}
```

```

    </Link>
    <Link
      id="5"
      to="/Product/CategoryL/26?menucat=5"
      target=""
      className="nav-dropdown-toggle"
    >
      零食
    </Link>
    <Link
      id="6"
      to="/Product/CategoryL/31?menucat=6"
      target=""
      className="nav-dropdown-toggle"
    >
      甜點
    </Link>
    <Link
      id="7"
      to="/Product/CategoryL/31?menucat=7"
      target=""
      className="nav-dropdown-toggle"
    >
      餐廚
    </Link>
    <Link
      id="8"
      to="/Product/CategoryL/31?menucat=8"
      target=""
      className="nav-dropdown-toggle"
    >
      玩樂生活
    </Link>
  </div>
</div>
</div>
</div>
);
};

export default Navbar;

```

Step2. 新增 Navbar.scss

Code:

```
.tvbs-customized {  
  .header {  
    margin-bottom: 1%;  
    box-shadow: 0px 5px 5px #eee;  
  }  
  .scrollmenu {  
    overflow: auto;  
    white-space: nowrap;  
    text-align: center;  
    margin: 6px auto;  
  }  
  .nav-dropdown-toggle {  
    display: inline-block;  
    color: #636161;  
    font-size: 16px;  
    text-align: center;  
    padding: 10px;  
    text-decoration: none;  
    cursor: pointer;  
  }  
  .nav-dropdown-toggle:hover {  
    color: #fd8e54;  
  }  
  .activated {  
    color: #fd8e54 !important;  
    font-weight: 500;  
  }  
  .header::after {  
    content: '';  
    display: table;  
    clear: both;  
  }  
}  
.top-padding {  
  height: 80.0469px;  
}
```

Step3. 步驟 1~2 結合後完成的樣子

與要複製的網頁對比
